Check & record temps at beginning & end of every day. Place an X in the correct box above to indicate temp. Record actual temperature for temps ≥ -14° or ≤ -26°. Round up to or down to the nearest whole number. Read Min/Max & reset data logger with a.m. temps. Keep temp logs on file for at least three years. Take IMMEDIATE action, and follow your emergency response plan, if temperature recorded is in the shaded area!
